All commercial, industrial, special use, and farm buildings properties shall be inspected (interior and exterior), classified, priced, and reviewed in the same manner as residential properties as previously set forth within this document, except that information concerning the income approach to value shall be gathered, analyzed, and tested against the cost approach to value in arriving at market value for purposes of this PROJECT. The Company shall guarantee to make a careful inspection of the complete interior of ninety-five percent (95%) of all properties, excluding those wherein the owner refuses permission or fail to respond to the notification letter.

VI. **APPRAISAL SPECIFICATIONS**

- A. **GENERAL:** The COMPANY shall calculate a value estimate for each parcel that will be comprised of 1) land value, 2) building value, 3) other improvement value and 4) total value.

A valuation pretest will be performed during the development of cost schedules, market adjustments, income, expense and capitalization factors. The pretest will involve the selection of representative sample properties, at the discretion of the ASSESSOR, for processing through CAMA calculations and for review in the field. This pre-test review may then result in further refinement to the components used in value calculations. In addition to this pre-test, all appraisals will be reviewed by the ASSESSOR and market data which becomes available during the time up through October 1, 2017 will be considered and tested against value estimates for the PROJECT. The end result of this value testing process will be the unit land values, the cost schedules, the market modules, the comparable sale selections and adjustment factors, the market rent, market expense and capitalization factors approved by the ASSESSOR for the reappraisal and revaluation of real property in the TOWN.

B. APPRAISAL OF RESIDENTIAL BUILDINGS & STRUCTURES

1. MARKET APPROACH

The Contractor must describe in detail its particular methods for generating values with the market value approach. The comparative sales approach or statistical modeling approaches are the two referred techniques. If a statistical modeling approach is employed, the Contractor must specify the techniques employed and the types of property that will be valued with these techniques. If the direct sales comparison method is employed, all adjustment techniques must be described by the Contractor in its Proposal.

a. Sales Verification

The validity of all sales for the past two (2) years shall be determined by the company and the Assessor. These validated sales will be the basis for the comparable sales approach for the residential properties.

The Contractor shall develop and provide the Assessor with written documentation for the sales verification effort.

2. COST ANALYSIS

The Contractor shall derive a value for real property by estimating the current cost to replace or reproduce the existing structure, deducting for all accrued depreciation in the property, and adding the estimated land value. The Contractor shall develop cost schedules based on current costs of labor and materials prevailing in the Town during the year immediately preceding October 1, 2017 valuation date.

3. LAND VALUATION

The land values will be derived from market sales and/or land residual analysis. The land values will be set by the Contractor and reviewed by the Assessor. In the event of any disagreement between the Assessor and the Contractor, the Assessor shall have the final decision confirming all land values and methods.

4. NEIGHBORHOOD DELINEATION

The Contractor, with the assistance and approval of Assessor will delineate the Town into valuation neighborhoods. These neighborhoods will be determined by analysis of the market factors needed to select comparable sales for the sales comparable approach to value. Boundaries such as highways, natural, economic conditions and zoning shall be considered.

5. **DEPRECIATION ANALYSIS**

The Contractor shall develop percent good or depreciation tables to explain the loss in the value of the improvements from physical, functional and economic causes. A comparison of the physically depreciated replacement cost of sample properties, plus the land value with the value produced via income analysis, or sales comparison, will assist in the development of functional and economic obsolescence guides by type of property and location. The end product will be percent good tables, which consider structure age, condition, desirability and utility. The analysis will be reviewed with the Assessor and a copy will be provided at the completion of the Project.

C. APPRAISAL OF LAND: The COMPANY shall appraise all land within the TOWN: residential, commercial, industrial, public utility, tax exempt or any other land whether vacant or improved. All valuations are subject to the approval of the ASSESSOR.

All necessary tables and charts shall be developed by the COMPANY for the valuing of land. These charts shall be prepared according to standard appraisal practices and subject to the approval of the ASSESSOR.

COMPANY as required or specified by the ASSESSOR will revise the values.

D. APPRAISAL OF COMMERCIAL, INDUSTRIAL, PUBLIC UTILITY, EXEMPT & SPECIAL PURPOSE PROPERTIES:

1. **Income Approach:** The appraisal of income producing properties relies heavily on an analysis of what the prudent investor would pay for a given property based on the income stream that the property could reasonably be expected to produce. In this regard, the actual income/expense information for each property will be collected and analyzed to arrive at a capitalization rate reflective of the market environment.

Income and expense data gathered by the TOWN shall be utilized by the COMPANY for income producing properties.
